

# HTML Template Example

**What you need for creating an html file:**

## ➤ **A plain text editor:**

### ❖ **for windows:**

- download notepad++ latest version: (32-bits or 64-bits, 64-bits may not support third part plugins, or you may search for and download plugins?)
- change setting: Settings preferences>Auto-completion>html tags
- (you can also add and change other preferences)
- add-ons: Click on Plugins>Plugin Manager>show plugin manager>check quick color picker  
(or: Plugins>Quick color picker>enable quick color picker)

**Important Note: Always save your text file with html extension (example: fileone.html)**

## ➤ **Browsers**

### ❖ **Use one of the following browsers:**

### ❖ **Most html tags supports the above brewers some may not, see: <https://www.w3schools.com/tags/>**

```
<!DOCTYPE html>
```

```
<html lang="en">
```

```
<head>
```

```
  <title> </title>
```

```
  <meta charset="utf-8">
```

```
    <!-- this is a comment: Unicode Transformation Format (UTF, 8 bits ASCII-->
```

```
  <link rel="stylesheet" href="filename">
```

```
    <!-- if link needed, example of file name: mystyle.css -->
```

```
</head>
```

```
<body>
```

```
  <!-- content of the web page goes here in the body, example below text-->
```

```
    <h1> </h1>
```

```
    <h6> </h6>
```

```
</body>
```

```
</html>
```

# HTML Template Example

```
<!DOCTYPE html>
```

```
<html lang="en">
```

```
<head>
```

```
  <title> My First Web Page </title>
```

```
  <meta charset="utf-8">
```

```
  <!-- Unicode Transformation Format (UTF, 8 bits ASCII -->
```

```
  <link rel="stylesheet" href="mystyle.css">
```

```
</head>
```

```
<body>
```

```
  <h1> Welcome to My Web Page </h1>
```

```
  <h1> Good Luck <1>
```

```
</body>
```

```
</html>
```
